#	Experiment	Configuration
1	Learning Period = 5 Minutes	Executor Granularity: 1 Executor Strategy: Queue Aware Table Initializer: Zero
2	Learning Period = 10 Minutes	Target Latency: 30 Seconds Decision Interval: 1 Minute History Window: 2 Minutes Learning Factor = 0.7
3	Learning Period = 20 Minutes	Discount Factor: 0.9 Policy: Greedy Reward: Prefer Scale-In When Load Is Decreasing
