#	Experiment	Configuration
1	Latency Granularity = 5 Seconds	Executor Granularity: 1 Executor Strategy: Queue Aware Table Initializer: Optimized
2	Latency Granularity =10 Seconds	Target Latency: 30 Seconds Decision Interval: 1 Minute History Window: 2 Minutes Learning Factor = 0.7
3	Latency Granularity = 15 Seconds	Discount Factor: 0.9 Policy: Greedy Reward: Prefer Scale-In When Load Is Decreasing
